QUOTED. Jan. 23, 2019. Patty Krantz-Zuppan.

by

Medtronic's Patty Krantz-Zuppan says when a device-maker implements cybersecurity risk-control measures, it must also consider the impact of those measures on device safety. See her remarks here.

"You want your device to be secure, so you might have password protections or timeouts for access. But that doesn't always work very well in a surgical suite. So, you must balance the intended use of the product with safety and security." –Patty Krantz-Zuppan, CRHM standards manager, Medtronic PLC
