## QUOTED. 13 April 2021. Sean McEligot

by

As medical organizations such as the Veterans Health Administration and Mayo Clinic are positioning themselves to become medical device manufacturers using 3D printing technologies, it opens challenges and opportunities. See what Mayo Clinic's Sean McEligot said about it here.

“It’s a scary world going from being in this gray area to being a full-on medical device manufacturer subject to audits and having to have auditable good manufacturing practices. It’s going to be quite a wild ride over the next year or so.” – Sean McEligot, section head of Medical Device Research and Development, Mayo Clinic
