QUOTED. 3 June 2021. Sonia Grego.

by

Researchers at Duke University have developed an artificial intelligence system that integrates with a toilet to make managing gastrointestinal health easier and less awkward for patients. Project engineer Sonia Grego told *Medtech Insight* about the benefits of the project.

"The technology design, while unique, does not require expensive components, so we anticipate that the retrofit will be affordable and worthwhile because it will enable automatic and seamless long-term tracking of gut health and wellness." – Sonia Grego, engineer, Duke University
